

Cydectin long acting injection for cattle

A macrocyclic lactone injectable drench for cattle for the treatment and control of moxidectin sensitive internal and external parasites in cattle.

COMPOSITION ;
Moxidectin 100mg/mL

CYDECTIN contains moxidectin, • A macrocyclic lactone (ML) or "mectin" class injection drench for cattle, • Broad spectrum control of internal and external parasites, • Kills roundworms for longer, • Controls Ostertagia for 112 days, • Controls barber's pole worm, lungworm and nodule worm for 120 days, • Controls black scour worm for 72 days, • Controls cattle tick for 28 days, • No known impact on dung beetles+

Cydectin Long Acting Injection for Cattle must be administered by Subcutaneous (under the skin) injection into the back of the ear towards its base. Do not administer anywhere else on the animal. Avoid intravascular (into the blood) injection.

Only use the Cydectin 5ml Injector. This applicator is

specifically designed to ensure trouble free application. Do not use any other injector.

Connect the applicator to the Cydectin Long Acting Injection for Cattle bottle using the supplied vented draw-off tube.

Use a clean and sharp 16 or 18 gauge 12 - 18mm (1/2- 3/4 inch) needle to inject.

Cydection Long Acting Injection is administered at 1mL/100kg liveweight (1mg moxidectin/kg)

Cattle should be weighed

prior to dosing and treating according to the weight ranges in the dosage table. Confine cattle in a crush and head bail when administering.
