

No better time to install solar

SOLAR Australia has been in operation for more than nine years – one of the longest in the industry

With its experience and history, you can be confident of good service right from your initial inquiry through to well after the job is completed.

So, if you do encounter a problem down the track, a local repairer will come and rectify the issue.

Solar Australia is based in Albury, but covers the wider Riverina, including Wagga, Griffith and further north to Cootamundra and Young.

It also services border towns such as Cobram and Deniliquin.

Solar Australia's Albury-based sales manager, Chris O'Brien, said one of the keys to the company's success and reputation was that it employed local electricians to install solar panels.

"What we think is really important is that we employ local electricians for quality service and back up," Mr O'Brien said.

"Solar Australia has been going for nine years, which we are proud of, and has led to our strong reputation."

Installing solar panels was all about assisting the customer – commercial or residential – save money on their ever increasing power bills.

Wagga-based D & S Taber Electrical director Russell Taber said Solar Australia was ensuring money filtered back into the local economy by employing tradespeople from the installation area.

"I think it's great that Solar Australia employs local tradespeople," Mr Taber said.

"A lot of people get a little bit scared if the tradies are from out of town and won't come and fix it up."

"However, using local people ensures some of the money stays local and they can contact a local if something goes awry."

Mr O'Brien said there was no better time to have solar panels installed, especially on commercial premises.

The spiralling cost of electricity had made solar more cost effective.

SUN-SATIONAL: Chris O'Brien, manager of Solar Australia's Albury branch, and Russell Taber, director of D & S Taber Electrical, discuss a new project.

"On a business site, you can cover 85-90 per cent of your electricity costs because most businesses are open 9am to 5pm," he said.
