PRESS RELEASE

CLIMATE CHANGE

All the talk over carbon emission reductions, carbon farming, energy conservation and renewable energy targets, clearly demonstrate that the Liberal Party is still beholden to the green religion of CO₂ man made climate change. The Liberal Party may appear to be the knight in shining armour, claiming to repeal the carbon tax, but it still wants to spend \$3.2Bn on direct action on Climate Change. From time to time we are reminded that the very scientific foundation of CO₂ caused global warming is crumbling.

This coming Federal Election should be a turning point for the future of Australia. Climate Change is really controlled in the ballot box. Professor Fritz Vahrenholt's experience with the IPCC has put it well with these words:

The choice is no longer between global warming catastrophe and economic growth but between economic catastrophe and climate sense.

The bottom line is really quite simple, if you want a government that will have funds for economic and infrastructure growth, you simply do not vote for a party that will waste money on climate change.

It's time once again for the tax payer to be reminded that man made climate change has its conception in crisis creation from the Club of Rome, its deception under Agenda 21, its scientific fraud in the IPCC, its financial fraud under the Renewable Energy Targets Scheme, Emissions Trading Scheme and Carbon Tax. Keep in mind, our lost sovereignty being in submission to the United Nations.

I WAS WRONG ON GLOBAL WARMING

"For many years, I was an active supporter of the IPCC and its CO₂ theory. Recent experience with the UN's climate panel, however, forced me to reassess my position.

.....the halt in global warming and is likely to continue for a whilewe should expect that by 2100 temperatures will not have risen more than 1°C, significantly less than proposed by the IPCC.

The choice is no longer between 'global warming catastrophe' and economic growth but between 'economic catastrophe' and 'climate sense'.

Professor Fritz Vahrenholt, March 2013

The professor is one of the fathers of Germany's environmental movement and the director one of Europe's largest renewable energy companies.
